                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       he invention relates to novel isolated lipid metabolism proteins (IMP) nd encoding nucleic acids comprising a polynucleotide sequence encoding polypeptide that functions as a modulator of seed storage compounds in plant. The LMP nucleic acid is useful in producing transgenic plants with increased levels of seed storage compound, e.g. lipid, a fatty acid, starch or a seed storage protein, as markers for specific regions of the genome and for evolutionary and protein structural studies. The resent sequence represents an LMP of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (BADI ) BASF PLANT SCI

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC This invention relates to a novel method for altering one or more plant CC characteristics. Specifically, it refers to identifying genes that are up CC - or down-regulated in transgenic plants overexpressing the heterodimeric CC E2Fa/DFa transcription factor of Arabidopsis and using these sequences to alter plant characteristics accordingly. The present invention describes CC generating transgenic plants for the production of growth regulators, CC enzymes, therapeutics, pharmaceuticals and animal feed products, where CC the altered plant characteristics are selected from increased yield or the altered plant characteristics are selected from increased yield or CC transduction, storage lipid mobilisation, biochemistry, signal CC transduction, storage lipid mobilisation and/or altered photosynthesis, CC each relative to the corresponding wild type plants. Accordingly, these sequences can also be useful as positive or negative selectable markers CC during transformation of cells or tissues. The identified genes play a crole in a variety of biological processes such as DNA replication, cell wall biosynthesis, nitrogen and/or carbon metabolism or they function as transcription factors. This polypeptide sequence is thale crees protein capressed by a gene repressed 1.3 fold or more in plants overexpressing CC thrention.

The present invention describes isolated polynucleotides (PN) comprising a sequence selected from one of 835 nucleotide sequences given in AAA67073 to AAA67907, their (reverse) complements, sequences producing an Expectation (E) value of 0.01 or less compared to the 835 sequences, sequences at least 50% identical to them, 200, 100, 40 or 20-mers of the 835 sequences or sequences that are degenerately equivalent or allelic to the 835 sequences. The polynucleotides are used to modify the activity of a polypeptide involved in a polypeaccharide biosynthetic pathway in the plant. They are especially used to modulate or alter the polysaccharide content, composition or structure of the plant. AAB16268 to AAB16340 are
                                                                                                                                                                                                                                                                                                                                                                                        New genes encoding proteins involved in a plant polysaccharide biosynthetic pathway, useful for modulating or altering the polysaccharide content, composition or structure of the plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Eucalyptus

The polynucleotides are used to modify the activity of a polypeptide involved in a polysaccharide biosynthetic pathway in the plant. They are especially used to modulate or alter the polysaccharide content, composition or structure of the plant. AAB16268 to AAB16340 are proteins encoded by some of the polynucleotide sequence given in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to coding sequences (see AAF44740-F44840 and AF944843-F44849) and proteins (see AAB5714-B65814) involved in programmed cell death (PCD; appotosis). The coding sequences and proteins of the present invention are useful for modulating a PCD or cell death pathway and various developmental pathways in a forestry plant, by stably incorporating one of the present coding sequences into the genome of the forestry plant, where the coding sequence provides a PCD pathway that is not present in a native form of the forestry plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 22; Page 70-71; 142pp; English.

The methods and compositions of the present invention to do with (I) are useful for modulating programmed cell death and thereby altering the development cycle of plant cells, and altering plant development. This is the amino acid sequence of a protein associated with the programmed cell death pathway.

The methods and compositions of the present invention to do with (I) sequences of plant cells, and altering plant development. This is the amino acid sequence of a protein associated with the programmed cell death hit the programmed cell death pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated polynucleotide useful for modulating programmed cell death, altering the development cycle of plant cells, and subsequently modifyin plant development.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               defender against cell death; lethal leaf spot; lesion stimulating death; seven in absentinia; transcription initiation factor; testis enhanced gene transcript.

fiber annexin - upland cotton
C;Species: Gossypium hirsutum (upland cotton)
C;Date: 29-Oct-1999 #sequence_revision 29-Oct-1999 #text_change 09-Jul-2004
C;Accession: T31428
R;Shin, H; Brown, R.M.
submitted to the EMBL Data Library, February 1997
A;Reference number: Z21028
A;Accession: T31428
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Molecule type: mRUA
A;Residues: 1-316 <SHI>
A;Cross-references: UNIPROT:082090; EMBL:U89609; NID:g3493171; PID:g3493172
A;Experimental source: strain Texas Marker1
C;Superfamily: annexin I; annexin repeat homology
C;Keywords: calcium binding

PATENT NO. 6812339
GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
FILE REFERENCE: CL001307
                                                                                                                                                                                            GENERAL INFORMATION:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
